## **CES 2017: Viaccess-Orca selects RT-RK solutions for its Automated Set-Top Box System**

**Rennes, France – January 3, 2017** – Viaccess-Orca, a visionary partner to content service providers worldwide, announces that it selects RT-RK solutions for its automated set-top box system. Viaccess-Orca intends to use the equipment to improve its testing process, when validating its partners' hardware and software set-top box products. The system includes a rack for testing of multiple set-top box units which enables parallel execution of different test plans. It provides a single platform for functional, regression, stress and performance testing. Supported by a powerful real-time 4k UHD AV grabber device and a simple user interface/dashboard framework for creation of tests, test plans, and test execution scheduling, the system comprises a powerful A/V for a complete testing of diverse scenarios and set-top box features.

*"We always aim at improving the quality of the solutions which are deployed by our customers. Our plan is to systematically run endurance and robustness tests with the RT-RK tool so that we have a sharp status of the solution before any roll-out. We were running those tests with an in-house tool, but thanks to RT-RK, we move onto one of the best-in-class tools,"* commented **Cédric Hardouin, Executive Vice President of R&D, Viaccess-Orca.**

*We are very pleased to support the testing of the excellent Viaccess-Orca products. Our expertise and experience in set-top box software, hardware and end-to-end approach in test automation will guarantee the best results. Promoted by Viaccess-Orca, our solutions for testing of the complete value chain with the same reference system gets another validation,"* commented **Vukota Pekovic, Head of Marketing and Sales at RT-RK.**
